Does anyone know the name of the affordable 1TB Storage Device that was talked about in the Cisco Keynote?

Thanks

In the joint EMC/Cisco/VMWare keynote, Chad Sakac mentioned running VMs off small IOmega devices. IOmega is part of EMC.

Chad was showing an Iomega StorCenter device. Details at the [Iomega](#) website.

Thanks for the question gang! The device I held up was correctly identified - it's an Iomega StorCenter (M1) unit that does NFS today.

Now, Iomega is supposed to be announcing its next generation network hard drive for consumers and SOHO users sometime in October. This is the much-anticipated small form factor, double drive NAS that will utilize EMC's Lifeline Linux OS system.

BTW - I overestimated the price 😊

I said \$329 in my session, and the StorCenter M1 currently sells for \$229 for the 1TB unit 😊
