Dec 17, 2008

I'm new to VMware and Virtualization and I was wondering if anyone could point me in the right direction really quick:

Which piece of VM software would I begin with to use my computer to run a different OS?

You could start with free VMware Player or Workstation

<http://www.vmware.com/products/player/>

<http://www.vmware.com/products/ws/>

or for the Mac: <http://www.vmware.com/products/fusion/>

Hi Matthew,

Newbie Question

Getting a copy of VMware Workstation or Server would be a good place to start. A lot will depend on the type (spec. and OS) of machine you have.

Check out the links offered by Tai.
