I was told at Best Buy that if I bought the VMware Fusion 2 that I could install PC games to my iMac. I have installed the VMware but how do I do it? Do I have to buy windows XP to do this?

Hi Krumbsnatcha,

Yes, you will have to purchase a copy of windows xp.

If you have an existing XP system you can use VMware Converter ([free download from VMWare](#)) and convert your XP system and run it on your iMac. This is nice if you are moving from the PC to the Mac. You'll have your old PC running on your iMac with all your apps and files working too.
