My kickstart script works fine. I need to add a second vmotiona and service console nics.

what is the syntax for this. I have managed to add the vswitch but need to add vmkernel and service console.

N.B. command line is what am looking..

If you have managed to add the vSwitch, you can add the second Service Console via

```
esxcfg-vswitch --add -pg Service \Console2 vSwitchx
```

Backup Vmotion configuration

vSwitchx- is the vSwitch in picture.

Next you need to assign a virtual interface to the above port group.

```
esxcfg-vswitch --add vswif1 --portgroup Service \Console2 --ip x.x.x.x --netmask x.x.x.0
```

Make sure of your network while assigning the IP address and the subnet mask.

Hope this helps..!!!
