

Connect Storage LUNs on Guest OS of ESX...

Hi All,

I am having 2 guest os on my ESX 3.5 server. Now I had assigned luns to my ESX server from storage.

But still I am not able to view those luns in my guest os.

If i use `fdisk -l` or `esxcfg-mpath -l` command on esx server, then it is showing me lun, which i had created on Array.

Is there any other thing i need to configure?

Connect Storage LUNs on Guest OS of ESX...

Anyone have idea on this?

Thanks & Regads,

Ashish Barot.
