Hi All,

Does anyone know what the topics are at vmworld in cannes?

Currently i'm thinking to go to cannes, but i was wondered if there's any information about version 4 or other interesting releases there.

Yesterday the VMworld Europe 2009 Speaker & Session catalog was published.

You can find it here: <https://www.vmworldeurope09.com/scheduler/controller/catalog>

Enjoy

I have not attended VMWorld before. I have had a look at all the breakout session topics and selected the ones I am interested in attending, but there does not seem to be a timetable for which sessions will be held where and when. Is this something that will be revealed at a later date? Are the sessions repeated incase there are overlaps? Do you generate the timetables based on people's selections?

Thanks...

The timetable will be in the handout you will receive when registering at Cannes at the Palais des Festival. The sessions and speakers catalog is still updated with new sessions and VMware is still busy planning.

vmworld europe 2009 topics?

I think I read somewhere that if sessions are very popular they will be repeated but maybe that someone else has more information on that subject.

You cannot select or pre-register for the sessions so timetables will not be based on people's selections.

But inspite that I'm sure you will have a great time in Cannes as I did last year.
