Hi Everyone,

Also this year we will have of course hands-on labs at VMworld in Europe. We have decided to make all the labs self paced, which will allow us to have more topics and more flexibility for you to attend.

Here is a short promo video about the labs:

Hi Richard,

I attended VMworld EUR 2008. I just checked the sessions & breaks for 2009. I would definitely like to be wrong in this one, but it seems to me that there is no any big difference regarding the sessions & labs content of 2009 (incl SRM labs) comparing to the last year. I was hoping at least a little preview of vSphere and other products coming in 2009 not to mention some technical tracks about them. Anything about that?

Thanks in advance

Hi,

The challenge with products that will be released at the show, is that we never can advertise them before hand. We will have labs that will explore the future of datacenter technologies and also labs on vmsafe and AppSpeed.

The content catalog will be updated soon with more sessions and will start to include the labs.

Richard

Hi again,

First of all: Thank you for a quick reply (no latency at all).

And the other thing: "It sounds better to me now after your reply 😊"

Kind regards

MB
