I have Mac Pro, running OS10 Leopard and VM Fusion with Windows Vista. i am a recent convert to Mac. I have an application that have used for some time on my othr PC called "Auto Hot Key" (short cut script program)...it requires that the "windows" key + another key to make the short cut work. Does anyone know a keyboard combination that will work as a "windows key as on the Mac keyboard????? Anyone's help would be greatly appreciated...Gary
