Feb 16, 2009

Hi,

I am working on a standalone machine(Windows XP). I have created a VM guest of XP also with 2003. Is it possible to communicate (to Share files) between the Host & Guest. The Host machine is not conneced with any network (Internet/Intranet/LAN). Pls let me know how to do this.

Regards,

Ganesh

Hi Ganesh,

How to Communicate with the Host &...

Yes, it's possible. If you're talking VMware Server, then you will do via normal Windows file sharing...so you need some type of networking between the Host and Guest.

Some helpful information may be found at

[http://communities.vmware.com/

Hi Peter,

How to Communicate with the Host &...

Thanks for the Info.

I am able to share files now either by darg & drop or By defining a shared folder under vm options.

Regards,

Ganesh
