I am assuming you are using a Windows VM?

How are you connecting to the VM, through a console, RDP, or some other means?

How to change the color quality of the...

I would need that clarification first.

Thanks For Reply.

Your r right that i m using windows machine 2k3/2k8 and windows xp proffessional .

the one diffrencece i have faced is that when i take cosole from vcms directly like open consile then machine display setting showing 32 bit colot setting and when take remote session of any of machine then same machoine showing only 16 bit color setting entry . please tell me how can i resolve this issue.

Take a look at this community forum and perhaps it might provide some insight. It appears that you are discovery the limitation of RDP (assuming you are using RDP) and this might provide some direction.
