Hi,

I am Facing Problem while addng Raw device in VM, after assign LUN in storage I have scan the new LUN for publishing, it is detecting on VMWARE server but not highlighted. check the attachment for reference.

Can any one help on this..

Regards,

Biju

Please check the exiting disk setting on that VM which you are trying to add RAW mapping device, click the existing virtual Hard Disk on right side in MODE option. Please make sure none of options under MODE should be select.

You may need to shutdown your VM to do that, once you deslect those then try to map the RAW device.

Thanks

VJ
