

ESX4i Statefull PXE Installation

Raghuram 1 posts since

Hi all,

I am having some challenges doing a PXE installation of esx4i in a statefull manner. The boot process loops with the error "Fatal: Cannot read image.tgz".

Below is the except from my pxe boot.conf

```
label ESXi_Installer
kernel mboot.c32
append vmkboot.gz --- vmkernel.gz ---sys.vgz --- cim.vgz --- ienviron.tgz --- install.tgz ---
image.tgz
```

I have confirmed that image.tgz exists and tried with the latest pxelinux.0.

Any suggestions on how to make a statefull pxe of esxi work? [A stateless install with different append options work just fine]
