

Planning for Business Continuity with...

Storage Virtual Appliance 4 posts since

May 8, 2009 **Join us for a Free Webinar on December 17th** What are your organizational resolutions for 2010? For many of you, implementing a Business Continuity strategy has been an unfulfilled resolution due to the associated costs of hardware and the complexity involved. According to VMware, Business Continuity tops customers' demand with 45 percent expressing that it is important for their organization. So where's the challenge? While VMware presents you with many of the advanced features enabling business continuity, you still require the shared storage that unlocks those features. As a result, a Business Continuity strategy is put on the back burner thus exposing your organization to risk. In fact, 93% of companies that suffer significant data loss are out of business in five years! Business Continuity plans will keep your organization up and running through interruptions but without the required shared storage, your organization is deprived of any of the features that enable this. Recently, StorMagic introduced the SvSAN, a virtual SAN that leverages the internal disks of your VMware server to give you shared storage. This smart technology prevents the need to invest in an expensive SAN or NAS and allows you to leverage advanced VMware features such as VMware HA, VMotion and DRS. SvSAN also integrates directly into vCenter making it one of the easiest management tools on the market. In the process, you've taken the first step toward your Business Continuity initiatives. As you begin 2010, it's time to implement your organization's Business Continuity strategy. The SvSAN removes the traditional cost and complexity barrier to give your business the protection it deserves. Join us for this informative webinar discussing how to plan for your Business Continuity in 2010. You will learn about Business Continuity considerations and how the SvSAN can go to immediate work for your organization. In fact, why not get a kick start today and download our complimentary SvSAN HA Kit by visiting www.StorMagic.com.
