Title: Senior Server Administrator

Location: Westport, CT

Tax Term: Fulltime / Contract / Contract to Permanent

About Client: Our Client manages global investments for a wide array of institutional clients, including foreign governments and central banks, corporate and public pension funds, university endowments and charitable foundations.

Position Summary:

The Server operations team is responsible for ensuring a stable and reliable server infrastructure (Windows, Linux, ESX), and for overseeing the building and deployment of machines into that environment. The team is expanding to meet the operational demands of a fast growing infrastructure. We are seeking talented individuals with the interest and capability to drive operational processes to the next level. The Senior Server Administrator is part of a team responsible for the day-to-day administration, operation, and support of Client's server infrastructure (including Windows Servers, Active Directory, and Virtual Machines within our VMware ESX environment).

We are looking for a hands-on Windows technology expert who must be able to operate and help improve the existing incident, request, change, problem, and risk management processes. We want to hire someone who strives for excellence and constant improvement in a dynamic environment. As a senior member of our client's IT department, you will be working on the mission-critical systems and shared infrastructure used to operate all of our research, trading, and back office systems.

Responsibilities would include:

- Helping to define and executing ongoing administration and health maintenance plans, procedures, and operations
- Creating and implementing a systems administration and improvement program to maximize uptime and service delivery in accordance with business needs and priorities
- Diagnosing, resolving and communicating advanced problems

Need Senior Server Administrator (...)

- Acting as a hands-on senior technical resource for several systems administrators while coaching, training, and directing the work of junior teammates

Position Requirements:

- College degree
- Deep and broad experience with Microsoft server technologies and relevant training or certifications (MCSE or MCP certifications)
- Deep and broad experience with ESX VMware server technologies and relevant training or certifications (Virtualization, VMware VI3)
- Experience performing second- and third-level Windows server operations support at mid- to large-scale enterprise
- Extensive experience with Microsoft clustering, SAN, exchange, Linux, and other systems administration experience desirable
- Experience in organizations that are not fully formed and matured – i.e. the ideal candidate needs to be comfortable bringing order to chaos, but knows what order looks like and how it comes about
- Deep understanding of the pillars of the ITIL framework
- Must have excellent organizational, verbal and written communication skills
- Must have a high degree of technical curiosity and a real passion for technology

Regards,

Vikas Kanoongo
