

ESX install fails at 64%

[jitender kumar](#) 1 posts since

I am using NEC Express 5800 R-120 server to install ESX 4.0 on it. Every time, it fails at 64% saying unable to download (some vmware-esx-tools). Not sure what is happening. Any idea?

Thanks

Have you checked whether the server is on the Hardware Compatibility List (HCL)?

Here is the link with which you can do a quick search:

<http://www.vmware.com/resources/compatibility/search.php>
